

AOL Pop-Up Controls

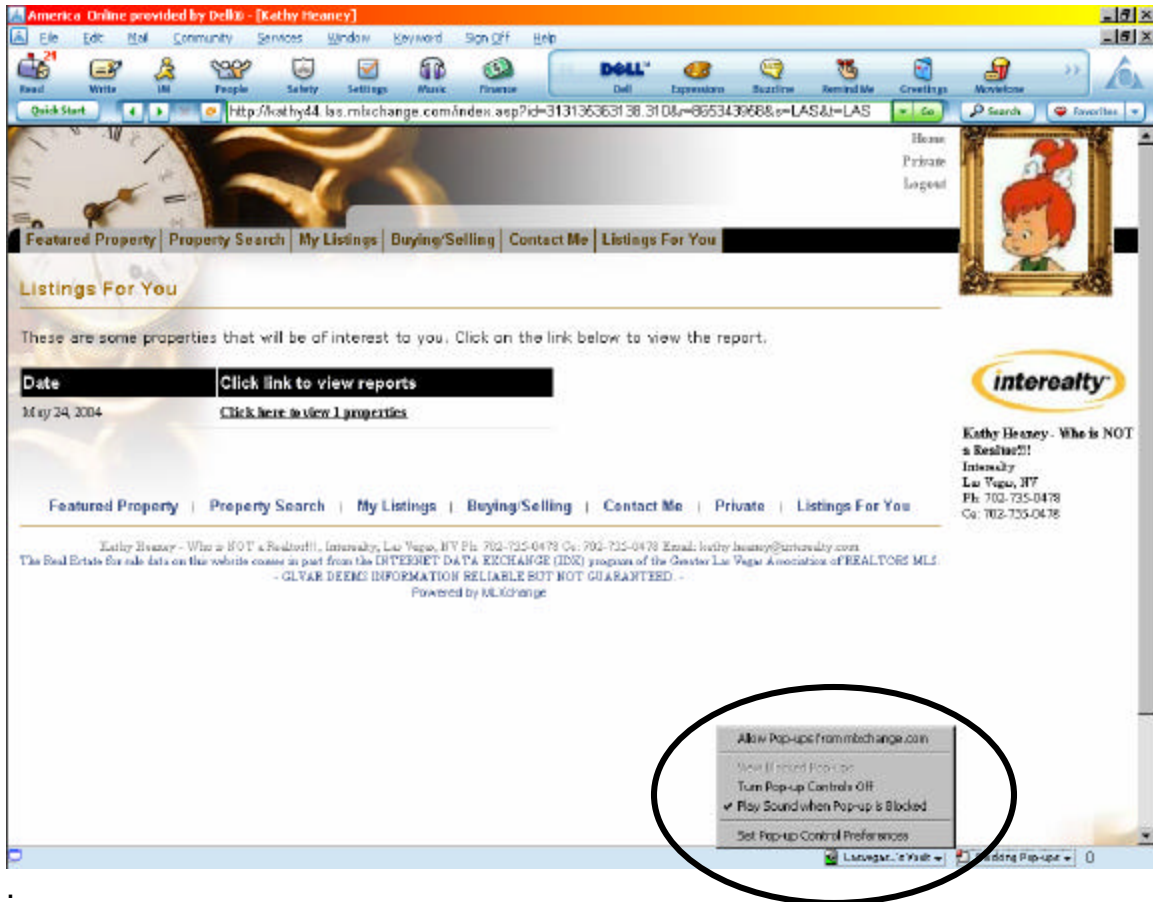

When you receive email from AOL, very often pop-up blockers will prevent viewing of this email. The way to prevent this is within the AOL settings.

While we cannot cover EVERY email scenerio, we have included some screen shots of AOL received mail from MLXchange Professional. We used AOL version 9.0, which is the latest version.

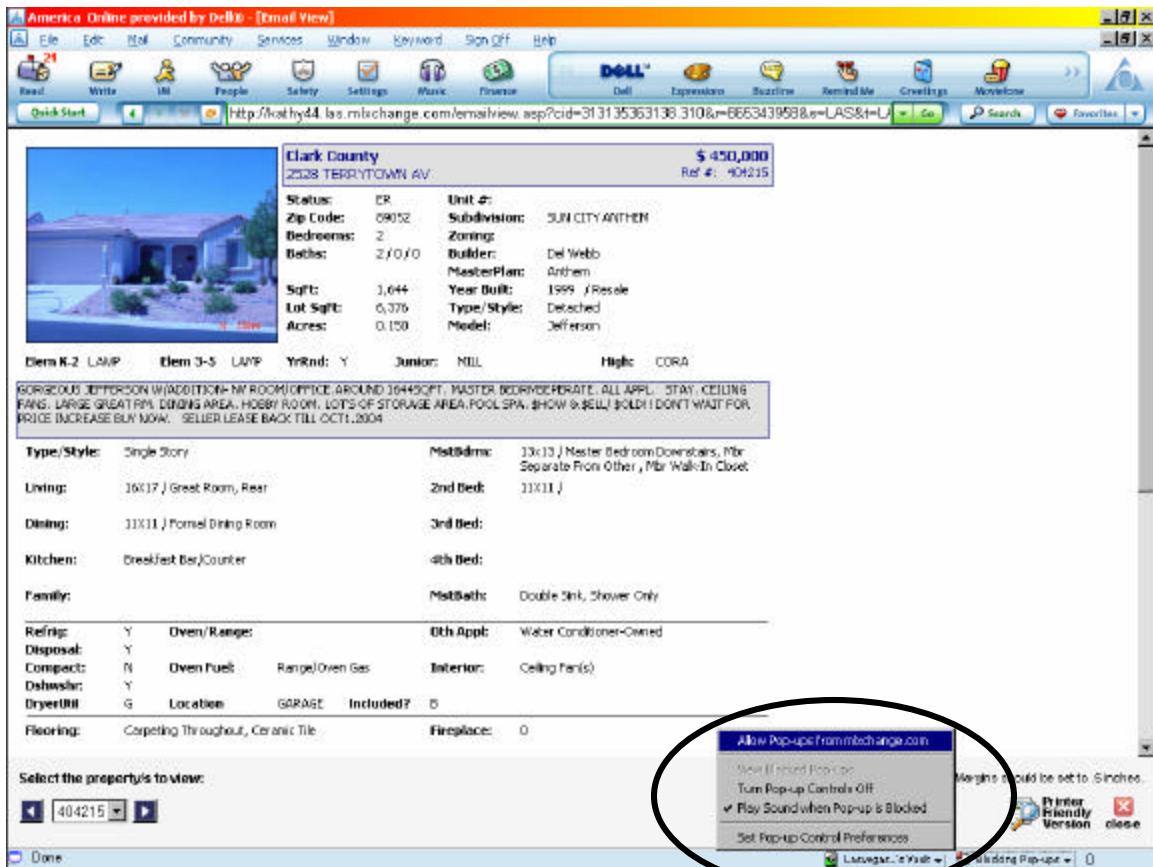

When your clients first receive an email within AOL 9.0, it will look as follows:

When they click on the link, your Agent Web Site will appear. The pop-up controls within AOL are located in the lower right-hand corner.

If a client clicks on the link and a blank page pops up, they will need to “Allow Pop-Ups from MLXchange” and/or “Turn Pop-up Controls Off” to view the listings.
